Based in Dubai | Open to roles across the UAE and remote | Notice period: up to 60 days, negotiable

SUMMARY

Product designer with 4+ years building digital products at Alamy (PA Media Group), a global e-commerce marketplace for stock images, promoted to mid-level in 2026. I own features end to end, from research, usability testing and analytics through user flows, prototypes and high-fidelity UI for desktop and mobile web, working in an agile team with product, engineering and QA. My latest project, a conversational AI Search Assistant, went from an inherited concept to a live beta on alamy.com. With a computer science degree and a start as a software developer, I build and extend code-connected design systems and can take a product from design to working front end in HTML, CSS, JavaScript, Tailwind CSS and React. I read and write Arabic.

SKILLS

- **Product and UX design:** end-to-end feature ownership, problem framing, personas, user flows, information architecture, wireframing, interactive prototyping, high-fidelity UI, edge cases and system states, accessibility standards, responsive desktop and mobile web design
- **Research and data:** usability testing (moderated and unmoderated), user and stakeholder interviews, concept testing, A/B testing, heatmaps, analytics, behavioural analysis, competitive analysis, success metrics
- **Design systems:** Figma components, auto layout, variants, tokens and variables, libraries, design-to-code alignment, Code Connect, developer handoff
- **AI product design:** conversational interfaces, AI behaviour and trust design, human-AI collaboration, AI-assisted design workflows, prompt engineering
- **Front-end development:** HTML, CSS, JavaScript, Tailwind CSS, React; building working prototypes and full apps from design to code with AI tools such as Claude Code
- **Service design and collaboration:** service blueprints, journey mapping, workshops, agile cross-functional teams, presenting trade-offs to leadership

EXPERIENCE

Product Designer, Alamy Images (PA Media Group) | Dec 2022 – Present

- Sole product designer in an agile team with a product manager, 2–3 developers, QA, a solutions architect and an SEO specialist; promoted to mid-level Product Designer in 2026.
- Design every feature for both desktop and mobile web, creating a dedicated mobile version of each design for Alamy's responsive website.
- **AI Search Assistant:** Took a conversational AI image search assistant from an inherited concept to a live beta on alamy.com (2026), owning research, interaction and visual design, prototyping and design system components.
- Raised unprompted discovery from 50% to 83% and halved time to find the feature (31.5s to 16.5s) across 3 rounds of unmoderated usability testing with 36 participants in 5 countries; reached 6.6/7 ease of use.
- Designed the AI's behaviour for trust: onboarding that says it finds real images rather than generating them, suggested prompts, empty and loading states, answers linked to real images, voice input and a clear way back to classic search.
- Redesigned the existing Smart Search toggle to end confusion with the assistant; an A/B test confirmed no negative impact on sales or search engagement.
- Extended the assistant to the homepage and product pages; early beta results: 46% image click-through, 8.6 searches per user and 25% of users tried voice in the first 5 days.
- **Lightbox rebuild:** Found that under 1% of in-collection interactions led to any action by leading discovery across 5 stakeholder interviews, 20 usability sessions in 8 countries, 14 competitors and a quarter of analytics; reframed the brief into two products on a shared foundation.
- Mapped 5 customer journeys with every step traced to evidence, designed all 8 Customer Collections screens in the design system, and caught 4 gaps (including two conflicting requirements documents) by auditing against 33 requirements.
- **Internal curation tool (2024):** Cut the time to correct search results from days to under 24 hours by designing a tool for the content team to edit metadata and boost or suppress images, replacing a slow, outdated CRM.
- Made moving images between collections 50% faster (ease of use 4.5/5) through interviews, shadowing and weekly prototype testing with the content team and search engineers.

- **Contributor platform redesign (2025–present, side project):** Cut upload and tagging steps by about 60% (25 to about 10) in usability testing, with 100% task completion and 4.6/5 satisfaction, redesigning an eight-year-old platform with AI-generated metadata, bulk editing and inline validation.
- **Service design (2023):** Exposed duplicated work and bottlenecks unknown to leadership by creating end-to-end service blueprints for the enterprise and contributor journeys, after interviews and workshops with 5 departments.
- **Design systems:** Reduced handoff friction by aligning legacy and new components in Alamy's design system and connecting Figma libraries to production code with Code Connect.
- **AI workflow:** Use Claude Code and Figma MCP with the code-connected design system for research synthesis, requirement audits, prototypes and on-brand screens.

Software Developer, Alamy Images (PA Media Group) | Jul 2022 – Nov 2022

- Built and optimised front-end and back-end features for Alamy's public website, including reusable, accessible UI components that supported later design system adoption.

UI/UX Design Intern, Multiple projects, including Larkcs Life Link Pvt Ltd | 2019 – 2021

- Designed user journeys, wireframes and prototypes for mobile and web, informed by interviews and usability testing, including the UI for a medical consultation app.

EDUCATION

BTech, Computer Science and Engineering, College of Engineering Trivandrum | GPA 8.9 | 2018 – 2022

CERTIFICATIONS

Interaction Design Foundation: AI for Designers, User Research Methods, Usability Testing, Service Design, Design Thinking. Prompt Engineering (online certification).

TOOLS

Figma (components, auto layout, prototyping), Figma AI, Adobe Creative Suite, Adobe XD, Sketch, HTML, CSS, JavaScript, Tailwind CSS, React, Claude Code, Figma MCP, Code Connect, ChatGPT, UserTesting.com, Dovetail, Google Analytics (GA4), Microsoft Clarity (heatmaps), AB Tasty, Mural, Notion, Jira, Confluence

LANGUAGES

English (fluent), Malayalam (native), Hindi (fluent), Arabic (read and write)
